

KÄRCHER KM 70/15 C

Six times faster than a broom, the KM 70/15 C incorporates a 2-wheel driven main roller brush. The advantages of this concept are the good straight forward drive and the sweeping result, even when driving a curve.

The KM 70/15 C stands out due to the 2-wheel driven main roller brush. The advantages of this concept are especially the good straight forward drive and the sweeping result when driving a curve. Even when there is only one wheel driven in close curves, the main roller brush works constantly, which leads to an outstanding sweeping result. This agile machine sweeps effectively in right curves as well as in left curves. The height of the side brush is adjustable in four steps.

With a weight of only 20 kg, the machine works with the dustpan principle: With little pushing force the dirt is transported in the driving direction into the 42 litre dirt container, which is in front of the main roller brush. On free areas the side brush can be lifted off the ground.

The dirt container has an ergonomic grip and is therefore easy to carry and empty. The robust frame in the front is also easy to grab and allows easy transport e.g. over steps. The push handle is foldable and can be adjusted in three steps according to the height and reach of the user. The push handle can be folded completely flat for space-saving storage.

Standard Features / Accessories

- Outdoor applications
- Indoor applications
- Manual sweep drive
- Dustpan principle
- Fold-down push handle

Part no. 1.517-151.0

TECHNICAL SPECIFICATIONS

Dimensions (L x W x H)	1300 x 810 x 1040 mm
Working width	480 mm
Working width with 1 side brush	700 mm
Container capacity	42 l
Max. area performance	2800 m ² /h
Weight	20 kg
